any interference to radio or television communications at your own expense. The following information is for FCC compliance of Class A devices: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio-frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case users will be required to correct the interference at their own expense.

The following information is for FCC compliance of Class B devices: The equipment described in this manual generates and may radiate radio-frequency energy. If it is not installed in accordance with Cisco’s installation instructions, it may cause interference with radio and television reception. This equipment has been tested and found to comply with the limits for a Class B digital device in accordance with the specifications in part 15 of the FCC rules. These specifications are designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation.

Modifying the equipment without Cisco’s written authorization may result in the equipment no longer complying with FCC requirements for Class A or Class B digital devices. In that event, your right to use the equipment may be limited by FCC regulations, and you may be required to correct any interference to radio or television communications at your own expense.

You can determine whether your equipment is causing interference by turning it off. If the interference stops, it was probably caused by the Cisco equipment or one of its peripheral devices. If the equipment causes interference to radio or television reception, try to correct the interference by using one or more of the following measures:

- Turn the television or radio antenna until the interference stops.
- Move the equipment to one side or the other of the television or radio.
- Move the equipment farther away from the television or radio.
- Plug the equipment into an outlet that is on a different circuit from the television or radio. (That is, make certain the equipment and the television or radio are on circuits controlled by different circuit breakers or fuses.)

Modifications to this product not authorized by Cisco Systems, Inc. could void the FCC approval and negate your authority to operate the product.

About this Guide

Use this guide to perform basic and advanced phone tasks using a phone in the Cisco IP Phone 7960 or 7940 series running in a Cisco CallManager phone system.

This book is organized in the following way:

<table>
<thead>
<tr>
<th>Chapter</th>
<th>Contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chapter 1, “Introducing Your Cisco IP Phone”</td>
<td>Instructions on installing your phone, an overview of your phone, information about the User Options web pages.</td>
</tr>
<tr>
<td>Chapter 2, “Customizing Phone Settings”</td>
<td>Information about configuring volume, contrast, and other phone settings.</td>
</tr>
<tr>
<td>Chapter 3, “Placing a Call and Other Basic Phone Tasks”</td>
<td>Procedures about how to perform basic phone tasks, like making a call and accessing voice mail.</td>
</tr>
</tbody>
</table>
## Related Documentation

For more information, refer to these documents:

- **At a Glance Cisco IP Phone 7960 and 7940 Series**—This booklet includes basic installation instructions and ships in the box with each phone.

- **Quick Reference Cisco IP Phone 7960/7940 Series**—This wallet card contains basic instructions and can be ordered separately.

- **Cisco IP Phone 7914 Expansion Module Quick Start Guide**—This guide includes user instructions and installation information for the Cisco IP Phone 7914 Expansion Module.

- **Regulatory Compliance and Safety Information for the Cisco IP Phone 7960, 7940, and 7910 Series**—This document provides international agency compliance, safety, and statutory information for Cisco IP Phone models in the 7960 series, 7940 series, and 7910 series.

Obtaining Documentation

These sections explain how to obtain documentation from Cisco Systems.

World Wide Web

You can access the most current Cisco documentation on the World Wide Web at this URL:

http://www.cisco.com

Translated documentation is available at this URL:

Documentation CD-ROM

Cisco documentation and additional literature are available in a Cisco Documentation CD-ROM package. The Documentation CD-ROM is updated monthly and may be more current than printed documentation. The CD-ROM package is available as a single unit or through an annual subscription.

Ordering Documentation

You can order Cisco documentation in these ways:

- Registered Cisco.com users (Cisco direct customers) can order Cisco product documentation from the Networking Products MarketPlace:
  http://www.cisco.com/cgi-bin/order/order_root.pl
- Registered Cisco.com users can order the Documentation CD-ROM through the online Subscription Store:
  http://www.cisco.com/go/subscription
- Nonregistered Cisco.com users can order documentation through a local account representative by calling Cisco Systems Corporate Headquarters (California, U.S.A.) at 408 526-7208 or, elsewhere in North America, by calling 800 553-NETS (6387).
Documentation Feedback

You can submit comments electronically on Cisco.com. In the Cisco Documentation home page, click the Fax or Email option in the “Leave Feedback” section at the bottom of the page.

You can e-mail your comments to bug-doc@cisco.com.

You can submit your comments by mail by using the response card behind the front cover of your document or by writing to the following address:

Cisco Systems
Attn: Document Resource Connection
170 West Tasman Drive
San Jose, CA 95134-9883

We appreciate your comments.

Obtaining Technical Assistance

Cisco provides Cisco.com as a starting point for all technical assistance. Customers and partners can obtain online documentation, troubleshooting tips, and sample configurations from online tools by using the Cisco Technical Assistance Center (TAC) Web Site. Cisco.com registered users have complete access to the technical support resources on the Cisco TAC Web Site.

Cisco.com

Cisco.com is the foundation of a suite of interactive, networked services that provides immediate, open access to Cisco information, networking solutions, services, programs, and resources at any time, from anywhere in the world.

Cisco.com is a highly integrated Internet application and a powerful, easy-to-use tool that provides a broad range of features and services to help you with these tasks:

- Streamline business processes and improve productivity
- Resolve technical issues with online support
- Download and test software packages
Obtaining Technical Assistance

- Order Cisco learning materials and merchandise
- Register for online skill assessment, training, and certification programs

If you want to obtain customized information and service, you can self-register on Cisco.com. To access Cisco.com, go to this URL:

http://www.cisco.com

Technical Assistance Center

The Cisco Technical Assistance Center (TAC) is available to all customers who need technical assistance with a Cisco product, technology, or solution. Two levels of support are available: the Cisco TAC Web Site and the Cisco TAC Escalation Center.

Cisco TAC inquiries are categorized according to the urgency of the issue:

- Priority level 4 (P4)—You need information or assistance concerning Cisco product capabilities, product installation, or basic product configuration.
- Priority level 3 (P3)—Your network performance is degraded. Network functionality is noticeably impaired, but most business operations continue.
- Priority level 2 (P2)—Your production network is severely degraded, affecting significant aspects of business operations. No workaround is available.
- Priority level 1 (P1)—Your production network is down, and a critical impact to business operations will occur if service is not restored quickly. No workaround is available.

The Cisco TAC resource that you choose is based on the priority of the problem and the conditions of service contracts, when applicable.

Cisco TAC Web Site

You can use the Cisco TAC Web Site to resolve P3 and P4 issues yourself, saving both cost and time. The site provides around-the-clock access to online tools, knowledge bases, and software. To access the Cisco TAC Web Site, go to this URL:

http://www.cisco.com/tac
All customers, partners, and resellers who have a valid Cisco service contract have complete access to the technical support resources on the Cisco TAC Web Site. The Cisco TAC Web Site requires a Cisco.com login ID and password. If you have a valid service contract but do not have a login ID or password, go to this URL to register:

http://www.cisco.com/register/

If you are a Cisco.com registered user, and you cannot resolve your technical issues by using the Cisco TAC Web Site, you can open a case online by using the TAC Case Open tool at this URL:

http://www.cisco.com/tac/caseopen

If you have Internet access, we recommend that you open P3 and P4 cases through the Cisco TAC Web Site.

Cisco TAC Escalation Center

The Cisco TAC Escalation Center addresses priority level 1 or priority level 2 issues. These classifications are assigned when severe network degradation significantly impacts business operations. When you contact the TAC Escalation Center with a P1 or P2 problem, a Cisco TAC engineer automatically opens a case.

To obtain a directory of toll-free Cisco TAC telephone numbers for your country, go to this URL:

Before calling, please check with your network operations center to determine the level of Cisco support services to which your company is entitled: for example, SMARTnet, SMARTnet Onsite, or Network Supported Accounts (NSA). When you call the center, please have available your service agreement number and your product serial number.
# Document Conventions

This document uses the following conventions:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>boldface</strong> font</td>
<td>Commands and keywords are in <strong>boldface</strong>.</td>
</tr>
<tr>
<td><em>italic</em> font</td>
<td>Arguments for which you supply values are in <em>italics</em>.</td>
</tr>
<tr>
<td>[ ]</td>
<td>Elements in square brackets are optional.</td>
</tr>
<tr>
<td>{ x</td>
<td>y</td>
</tr>
<tr>
<td>[ x</td>
<td>y</td>
</tr>
<tr>
<td>string</td>
<td>A nonquoted set of characters. Do not use quotation marks around the string or the string will include the quotation marks.</td>
</tr>
<tr>
<td><strong>screen</strong> font</td>
<td>Terminal sessions and information the system displays are in <strong>screen</strong> font.</td>
</tr>
<tr>
<td><strong>boldface screen</strong> font</td>
<td>Information you must enter is in <strong>boldface screen</strong> font.</td>
</tr>
<tr>
<td><em>italic screen</em> font</td>
<td>Arguments for which you supply values are in <em>italic screen</em> font.</td>
</tr>
<tr>
<td>^</td>
<td>The symbol ^ represents the key labeled Control—for example, the key combination ^D in a screen display means hold down the Control key while you press the D key.</td>
</tr>
<tr>
<td>&lt; &gt;</td>
<td>Nonprinting characters, such as passwords are in angle brackets.</td>
</tr>
</tbody>
</table>

**Note**

Means reader take note. Notes contain helpful suggestions or references to material not covered in the publication.
Caution
Means reader be careful. In this situation, you might do something that could result in equipment damage or loss of data.

Warnings use the following conventions:

Warning
This warning symbol means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents. To see translations of the warnings that appear in this publication, refer to the Regulatory Compliance and Safety Information document that accompanied this device.

Waarschuwing
Dit waarschuwingssymbool betekent gevaar. U verkeert in een situatie die lichamelijk letsel kan veroorzaken. Voordat u aan enige apparatuur gaat werken, dient u zich bewust te zijn van de bij elektrische schakelingen betrokken risico’s en dient u op de hoogte te zijn van standaard maatregelen om ongelukken te voorkomen. Voor vertalingen van de waarschuwingen die in deze publicatie verschijnen, kunt u het document Regulatory Compliance and Safety Information (Informatie over naleving van veiligheids- en andere voorschriften) raadplegen dat bij dit toestel is ingesloten.

Varoitus
Attention Ce symbole d’avertissement indique un danger. Vous vous trouvez dans une situation pouvant causer des blessures ou des dommages corporels. Avant de travailler sur un équipement, soyez conscient des dangers posés par les circuits électriques et familiarisez-vous avec les procédures couramment utilisées pour éviter les accidents. Pour prendre connaissance des traductions d’avertissements figurant dans cette publication, consultez le document Regulatory Compliance and Safety Information (Conformité aux règlements et consignes de sécurité) qui accompagne cet appareil.

Avvertenza Questo simbolo di avvertenza indica un pericolo. La situazione potrebbe causare infortuni alle persone. Prima di lavorare su qualsiasi apparecchiatura, occorre conoscere i pericoli relativi ai circuiti elettrici ed essere al corrente delle pratiche standard per la prevenzione di incidenti. La traduzione delle avvertenze riportate in questa pubblicazione si trova nel documento Regulatory Compliance and Safety Information (Conformità alle norme e informazioni sulla sicurezza) che accompagna questo dispositivo.

Advarsel Dette varselsymbolet betyr fare. Du befinner deg i en situasjon som kan føre til personskade. Før du utfører arbeid på utstyr, må du vare oppmerksom på de faremomentene som elektriske kretser innebærer, samt gjøre deg kjent med vanlig praksis når det gjelder å unngå ulykker. Hvis du vil se oversettelser av de advarslene som finnes i denne publikasjonen, kan du se i dokumentet Regulatory Compliance and Safety Information (Overholdelse av forskrifter og sikkerhetsinformasjon) som ble levert med denne enheten.
Aviso
Este símbolo de aviso indica perigo. Encontra-se numa situação que lhe poderá causar danos físicos. Antes de começar a trabalhar com qualquer equipamento, familiarize-se com os perigos relacionados com circuitos elétricos, e com quaisquer práticas comuns que possam prevenir possíveis acidentes. Para ver as traduções dos avisos que constam desta publicação, consulte o documento Regulatory Compliance and Safety Information (Informação de Segurança e Disposições Reguladoras) que acompanha este dispositivo.

¡Advertencia!
Este símbolo de aviso significa peligro. Existe riesgo para su integridad física. Antes de manipular cualquier equipo, considerar los riesgos que entraña la corriente eléctrica y familiarizarse con los procedimientos estándar de prevención de accidentes. Para ver una traducción de las advertencias que aparecen en esta publicación, consultar el documento titulado Regulatory Compliance and Safety Information (Información sobre seguridad y conformidad con las disposiciones reglamentarias) que se acompaña con este dispositivo.

Varning!
Denna varningssymbol signalerar fara. Du befinner dig i en situation som kan leda till personskada. Innan du utför arbete på någon utrustning måste du vara medveten om farorna med elkretsar och känna till vanligt förfarande för att förebygga skador. Se förklaringar av de varningar som förkommer i denna publikation i dokumentet Regulatory Compliance and Safety Information (Efterrättelse av föreskrifter och säkerhetsinformation), vilket medföljer denna anordning.
Introducing Your Cisco IP Phone

A Cisco IP Phone is a full-feature telephone that provides voice communication over the same data network that your computer uses. This phone functions much like a traditional analog phone, allowing you to place and receive telephone calls. It also supports features that you have come to expect from a telephone—such as speed dialing, redial, call transfer, conference calling, and voice mail access.

Your Cisco IP Phone offers features that might surprise you. Because it is part of an IP network, your Cisco IP Phone can provide not only telephony services, but data services, too—including up-to-the-minute information and services from the network. In a nutshell, your Cisco IP Phone provides a whole range of communication features that you could not expect from a traditional telephone.

This guide helps you learn to use the various features and services available on your phone. Not all of the features described in this book are available by default—your administrator may not add them for you. You access some phone features and services on the phone itself, while you customize others on a convenient web page. For information about the User Options web page, see Customizing Your Phone From the User Options Web Pages, page 1-15.

This chapter contains the following sections:

- Connecting Your Cisco IP Phone, page 1-2
- A Road Map to Your Cisco IP Phone, page 1-6
- Using the Feature Buttons, page 1-10
- Navigating on Your Phone, page 1-11
- Using the Handset, Headset, and Speakerphone, page 1-12
- Customizing Your Phone From the User Options Web Pages, page 1-15
Connecting Your Cisco IP Phone

Chances are, your system administrator or a technician will connect your new Cisco IP Phone to the corporate IP telephony network. If that is not the case, connecting your phone is easy.

Follow the steps below. Refer to Appendix B to locate ports on the back of your phone.

Before You Begin
Verify that your system administrator is ready for you to connect your Cisco IP Phone to the network.

Warning
Be sure to read Appendix B, “Safety Notices,” before connecting or using your phone.

Step 1
Connect your Cisco IP Phone to the corporate IP telephony network. You can do this in one of two ways, depending on how your workspace is set up. See your system administrator if you are not sure which method to choose:

- Direct network connection—For this method, you need at least one available Ethernet port in your workspace. Use the Ethernet cable included with your phone to connect the network port on the back of your phone to the Ethernet port in your workspace.

- Shared network connection—Use this method if you have a single Ethernet port in your workspace with your desktop computer already connected to it. First, disconnect the Ethernet cable from the computer and attach it to the network port on the back of your phone. Next, use the Ethernet cable included with your phone to connect the access port on the back of your phone to your desktop computer. Your Cisco IP Phone now shares a network connection with your computer.

Step 2
Connect the handset to the handset port. Ensure that the end of the cord with the longer uncoiled section is connected to the body of the phone.
Step 3  If your system administrator delivered your Cisco IP Phone with a power supply, connect the power supply plug to the DC48V AC adapter port on the back of the phone.

If your system administrator delivered your phone without a power supply, your phone probably receives power through the Ethernet connection.

Step 4  Use the power cable to connect the power supply to a standard power outlet in your workspace.

Step 5  To adjust the footstand height, release the footstand by pressing the footstand adjustment knob and gently pull the footstand away from the body of the phone.

See the “Adjusting the Handset Rest” section on page 1-12 for information on adjusting the handset rest to make sure the receiver will sit securely in the cradle.

Once you connect the Cisco IP Phone to its power source, a start-up process begins. After several minutes, the phone’s LCD screen displays a neutral “ready” screen. The details on your screen might vary, but a ready screen typically displays the date and time, your extension number, and available soft keys. Startup is complete and your phone is ready to use.

Tip  Soft keys point to feature options displayed along the bottom of your LCD screen. Soft keys are flexible—they change depending on the status of your phone. For example, you can see one set of soft key options when you pick up the handset, and another set when the phone is not in use.

Auto-Registering Your Phone Using TAPS

Your administrator may ask you to auto-register your Cisco IP Phone using TAPS, the Tool for Auto-Registered Phones Support. TAPS might be used either for a new phone or to replace an existing phone.

Note
You should follow this procedure only if your phone administrator asks you to.

Procedure

Step 1
If the phone is not already installed, follow the installation instructions available in the “Connecting Your Cisco IP Phone” section on page 1-2.

After you plug the phone into a port, the phone automatically registers and displays a number.

Step 2
Dial the TAPS extension provided by your system administrator.

Step 3
A voice prompt asks you to select the language that you want to use. Choose appropriately.

Step 4
Dial your personal extension number (provided by your system administrator), then press the # key.

Note
You may be instructed to enter the complete telephone number (including area code).
Chapter 1      Introducing Your Cisco IP Phone

Step 5  To confirm, enter your personal extension number again, followed by the # key.
The phone displays a confirmation message.

Step 6  Hang up the phone.
The phone resets and displays your extension number.

Using the Feature Buttons

Your Cisco IP Phone has five feature buttons:

- **Services** button—Displays services on your phone’s LCD screen. These are services to which you have already subscribed using the Cisco CallManager User Options web pages. Your system administrator determines the services that are available to you. For more information, see the “Establishing Cisco IP Phone Services” section on page 1-18.

- **Messages** button—Provides access to your voice mail message system. For more information, see the “Using Voice Mail” section on page 3-21.

- **Settings** button—Displays network settings on your phone’s LCD screen, plus options for adjusting your phone’s ringer sound and LCD screen contrast.

- **Directories** button—Displays various directories on your phone’s LCD screen, including missed, received, and placed calls. You can use each of these directories to locate phone numbers and you can dial those numbers from the directories. For more information, see the “Viewing and Dialing from the Phone Logs” section on page 3-21 and the “Searching and Dialing from the Phone Directory” section on page 3-23.

- **?** button—Displays helpful information about buttons and features.

  For help with:
  
  - A specific button or softkey—Press the ? button once, then press the button or softkey to display information about that button or key.
  
  - A specific feature—First press the **Directories, Settings, or Services** buttons to display a list of available features. Use the Navigation button to scroll through the list and select a feature. Press the ? button twice quickly to display information about the selected feature.
  
  - The ? button feature itself—Press the ? button twice quickly (without first selecting a feature). This brings up help about using the ? button.
  
  - Viewing network statistics about a call you are actively on—Press the ? button twice quickly during the call.

- Navigating on Your Phone, page 1-11
Navigating on Your Phone

Navigating on your Cisco IP Phone is easy. You use the Navigation button, the softkeys, and the key pad to make your selections:

- Softkeys correspond to the option tabs displayed along the bottom of your LCD screen. Softkeys change depending on the status of your phone. For example, you can see one set of softkey options when you pick up the handset, and another set when the phone is not in use.

- The >> softkey allows you to re-position your cursor. The << softkey allows you to delete a character or digit in an entry. Press the << softkey or the Delete softkey if you make a mistake or need to edit an entry. The Delete softkey allows you to edit a character or digit—it does not delete the entire entry.

- You can choose menu items on your Cisco IP Phone in more than one way:
  - Using the Navigation button—Press the Navigation button (this is the button with the up and down arrows) to select (or highlight) a menu item. Then press the Select softkey.
  - Using an Item Number—You can press the number key on your phone’s key pad that corresponds to the item number displayed on the LCD screen. Use this method to select any menu item that has an item number to the left of it.

- To enter any letter on your LCD screen, use a corresponding number key. Press the key one or more times to display a particular letter. For example, press the 2 key one time for “a,” twice quickly for “b,” and three times quickly for “c.” After you pause, the cursor automatically advances to allow you to enter the next letter. Press the << softkey if you make a mistake.
Using the Handset, Headset, and Speakerphone

Your Cisco IP Phone works with a handset, headset, or speakerphone. For information on using each of these, refer to the following sections:

- Using the Handset, page 1-12
- Adjusting the Handset Rest, page 1-12
- Using the Speakerphone, page 1-14
- Using the Headset, page 1-14

Using the Handset

The handset on your Cisco IP Phone functions in the same way as a handset on a traditional phone:

- To place and answer calls with the handset, simply lift the handset.
- To hang up, place the handset back in its cradle.
- To switch from the handset to the speakerphone, press the Speaker button on the front of your phone during a call, then hang up the handset.

Related Topics

- Adjusting the Handset Rest, page 1-12
- Adjusting the Handset, Speakerphone, and Headset Volume, page 2-1

Adjusting the Handset Rest

If you mount your Cisco IP Phone on the wall or use the footstand on the phone, you can adjust the handset rest to ensure the receiver will not slip out of the cradle.

To adjust the handset rest, follow the steps and refer to Figure 1-3.
Set the handset aside and use your thumb and finger to grasp and pull out the square plastic tab in the handset rest.

Rotate the tab 180 degrees.

Slide the tab back into the handset rest with the extension protruding from the top of the tab. Replace the handset in the rest. The tab hooks into a slot in the handset to ensure that the handset will not slip out of the rest.

Related Topics
- Using the Handset, page 1-12
Using the Speakerphone

You can use the speakerphone in conjunction with all of the features on your Cisco IP Phone.

To place and answer calls using the speakerphone, press the Speaker button.

To switch from speakerphone to handset during a call, simply lift the handset.

Related Topics
- Adjusting the Handset, Speakerphone, and Headset Volume, page 2-1

Using the Headset

You can use the headset in conjunction with all of the features on your Cisco IP Phone, including the Volume and Mute buttons. Use these buttons to adjust the volume to the ear piece and to mute the speech path from the headset microphone.

To place and answer calls using a headset, plug an approved headset into the back of the phone base and press the Headset button on the front of your phone.

Your phone supports four- or six-wire headset jacks. For information about purchasing headsets, see the following URLs:
- http://cisco.getheadsets.com
- http://vxicorp.com/cisco

Caution
Use only Cisco-approved headsets.

Warning
This product relies on the building’s installation for short-circuit (overcurrent) protection. Ensure that a fuse or circuit breaker no larger than 120 VAC, 15A U.S. (240 VAC, 10A international) is used on the phase conductors (all current-carrying conductors).
Warning
To avoid electric shock, do not connect safety extra-low voltage (SELV) circuits to telephone-network voltage (TNV) circuits. LAN ports contain SELV circuits, and WAN ports contain TNV circuits. Some LAN and WAN ports both use RJ-45 connectors. Use caution when connecting cables.

on page 1-4 illustrates the headset port and other cable connection ports on your phone.

Customizing Your Phone From the User Options Web Pages

You can use the Cisco CallManager User Options web pages to subscribe to services. Services include web-based information and special phone features. In addition to subscribing to services, you can use the Cisco CallManager User Options web pages to:

• set up call forwarding rules—Forwarding Calls to Another Extension, page 3-14
• change the language in which you view phone information—Changing the Language for the Phone LCD Screen, page 2-6
• specify a policy for the message waiting indicator light on your phone’s handset—Adjusting the Message Waiting Indicator Light, page 2-4
• assign speed dial buttons for your Cisco IP Phone—Using Speed Dial, page 3-12
• manage personal contacts—, page 4-5

Note
If you use the Cisco CallManager Extension Mobility service, changes that you make from the User Options web pages are maintained in your device profile.
You can also get a copy of the documentation available for your phone on the User Options Pages.

This section covers the following topics:

- Logging In to the User Options Web Pages, page 1-16
- Changing the Default Language for the User Options Web Pages, page 1-17
- Establishing Cisco IP Phone Services, page 1-18

## Logging In to the User Options Web Pages

Follow these instructions to log on and to access the main menu.

**Procedure**

**Step 1** Use your Web browser to access the URL provided by your system administrator.

The Cisco CallManager User Options Log On page appears.

**Step 2** Enter your user ID and your password and click **Log On**. Your user ID and password are provided by your system administrator.

The Cisco CallManager User Options Menu page appears.

**Step 3** Select your phone or, if applicable, your Cisco CallManager Extension Mobility device profile from the “Select a device to configure” drop-down list.

The menu is context-sensitive and displays options appropriate for the device or device profile that you have selected.

**Related Topics**

- Changing the Default Language for the User Options Web Pages, page 1-17
- Establishing Cisco IP Phone Services, page 1-18
Changing the Default Language for the User Options Web Pages

Use this procedure to change the default language (French or English, for example) in which information is displayed on the Cisco CallManager User Options web pages.

If you use the Cisco CallManager Extension Mobility service, follow this procedure to change the default language for both your device profile and your User Options web pages.

To temporarily change the language for the User Options web pages, click the “View page in” drop-down list located at the bottom of each web page. This changes the language displayed for the current web session. The next time that you log on, the User Options web pages will display in the default language.

Before You Begin
Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.

Procedure

Step 1 From the User Options main menu, select your phone or, if applicable, your Cisco CallManager Extension Mobility device profile from the Select a device to configure drop-down list.

The menu is context-sensitive and displays options appropriate for the device or device profile that you have selected.

Step 2 The next step depends upon your selection from the Select a device to configure drop-down list:

a. If you selected your phone (and not a device profile), click Change the Locale for these web pages.

b. If you selected a device profile, click Change the Locale for your device profile(s) and these web pages.

Note You will not have access to a device profile unless you use the Cisco CallManager Extension Mobility service.
Step 3
Select the language that you want to use as the default language from the “User Locale” drop-down list and click **Update**.

The language that you have selected now serves as the default language for each of the User Options web pages in the current web session and in future sessions. If you use Cisco CallManager Extension Mobility, the default language will display on the LCD screen the next time you log on to a Cisco IP Phone.

Step 4
When you are finished, click **Return to the Menu** or **Log Off** at the bottom of the page.

**Establishing Cisco IP Phone Services**

You can access information services, such as weather, stock quotes, and other services available at your company, using your Cisco IP Phone’s LCD display. Before accessing these services on your phone, your system administrator must customize them and make them available to you. Additionally, you must subscribe to the services that you want to appear on your phone.

To view services that you have subscribed to, press the **Services** button on your Cisco IP Phone. Use the Navigation button to select the desired service, then press the **Select** softkey to display information about that service. When you are finished, press the **services** button to exit the Services menu.

You can subscribe to the same service multiple times and give each instance of the same service a unique name. For example, if you want to subscribe to a weather service for several regions, you can rename each version.

The following topics describe how to establish services with the User Options web pages:
- **Subscribing to Services**, page 1-19
- **How to Change or End Subscriptions**, page 1-20
Subscribing to Services

Follow these steps to subscribe to services.

Before You Begin
Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.

Procedure

Step 1 From the User Options main menu, click Configure your Cisco IP Phone Services.
The Subscribe/Unsubscribe IP Phone Services page appears.

Step 2 Select the service you want to add to your phone from the “Available Services” drop-down list.

Step 3 Click Continue.

Step 4 Enter any required information. For example, if the service is “movie times,” you might need to enter your zip code to enable the service to display movies in your location.

Step 5 When you are done, click Subscribe to save your settings. To restore your previous settings, click Back.

Note If your phone uses Cisco CallManager Extension Mobility, you will need to log out and then log back in to the extension mobility service on your IP Phone before the changes take effect.
Customizing Your Phone From the User Options Web Pages

## Step 6
To subscribe to another service, click **New Subscription** in the Subscribed Services pane.
To exit, click **Return to the Menu** or **Log Off** at the bottom of the page.

### Related Topics
- Establishing Cisco IP Phone Services, page 1-18
- How to Change or End Subscriptions, page 1-20

### How to Change or End Subscriptions
You can change or end your current subscriptions at any time. To do so, follow these steps.

**Before You Begin**
Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.

**Procedure**

<table>
<thead>
<tr>
<th>Step 1</th>
<th>From the User Options main menu, click <strong>Configure your Cisco IP Phone Services</strong>. The Subscribe/Unsubscribe IP Phone Services page appears.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>In the Your Subscribed Services pane, click on the service that you want to change or end.</td>
</tr>
<tr>
<td>Step 3</td>
<td>If you want to change your subscription, change the information in the desired fields and click <strong>Update</strong>. Or, click <strong>Unsubscribe</strong> to end your subscription to the service.</td>
</tr>
</tbody>
</table>

**Note**
If your phone uses Cisco CallManager Extension Mobility, you will need to log out and then log back in to the extension mobility service on your IP Phone before the changes take effect.
Customizing Your Phone From the User Options Web Pages

Chapter 1      Introducing Your Cisco IP Phone

Step 4
When you are finished, click Return to the Menu or Log Off at the bottom of the page.

Related Topics

Customizing Phone Settings

These procedures help you personalize settings for your Cisco IP Phone:

- Adjusting the Handset, Speakerphone, and Headset Volume, page 2-1
- Adjusting the Ringer Volume, page 2-2
- Personalizing the Ringer Sound, page 2-3
- Adjusting the Message Waiting Indicator Light, page 2-4
- Changing the LCD Screen Contrast, page 2-5
- Changing the Language for the Phone LCD Screen, page 2-6

Adjusting the Handset, Speakerphone, and Headset Volume

You can adjust the volume of the caller for the handset, speakerphone, and headset individually. When you change the volume for one, the others are not effected.

Follow these steps to adjust the volume on the handset, speakerphone, or headset.

Procedure

**Step 1**
Press the up or down **Volume** button when the handset, speakerphone, or headset is in use.
Note
If you press the Volume button when none of these are in use, you are adjusting the ringer volume. For details, see the “Adjusting the Ringer Volume” section on page 2-2.

Step 2
To save this volume setting for future calls, press the Save softkey.

If you adjust the volume during a call without pressing Save, you are changing the volume level only for the duration of that particular call; on subsequent calls, the volume level will revert to the previously saved setting.

Related Topics
- Adjusting the Ringer Volume, page 2-2
- Personalizing the Ringer Sound, page 2-3
- Changing the LCD Screen Contrast, page 2-5

Adjusting the Ringer Volume

To change the volume used by the ringer, press the up or down Volume button while the handset is in its cradle. Continue to press the Volume button to hear sample rings and to adjust the volume to the desired level. The ringer volume is automatically saved.

Related Topics
- Adjusting the Handset, Speakerphone, and Headset Volume, page 2-1

- Changing the LCD Screen Contrast, page 2-5
Personalizing the Ringer Sound

You can change the sound your phone makes when it rings to suit your tastes and to help you differentiate between your phone ringing and another nearby phone, or to differentiate between different lines on your own phone.

Follow these steps to change the sound used by the ringer.

Procedure

Step 1 Press the Settings button.

Step 2 From the Settings menu, use the Navigation button to select Ring Type and press the Select softkey.

Step 3 If you have multiple lines, use the Navigation button to scroll through the list of your lines. When you find the line you want to configure, press the Select softkey.

Note You can only use six different ring tones on your phone. If you have more than six lines, some of your lines must share a ring tone.

Step 4 Use the Navigation button to scroll through the list of ring types and press the Play softkey to hear the selected ring type.

Step 5 When you find the ring you want, press the Select softkey to check the corresponding check box.

To set the ring tone back to the default ring tone, select Default from the list.

Step 6 Press the OK softkey to accept and save your ringer selection.

Step 7 Press the Save softkey to save all of your settings and to exit the Settings menu.

Related Topics

Adjusting the Message Waiting Indicator Light

You can change the behavior policy of the message waiting indicator light (or “lamp”) for each line appearance on your Cisco IP Phone. The message waiting indicator is the red strip on your phone’s handset that blinks when you receive an incoming call. In its default state, the message waiting indicator light is usually configured to remain lit when you receive a new voice mail message. However, the default policy is determined by your system administrator.

Follow these steps to specify the message waiting indicator light policy (on, off, or default) for one or more of your phone lines.

Before You Begin
Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.

Procedure

Step 1
From the User Options web page, click Change the Message Waiting Lamp policy for your phone.

The Change Your Message Waiting Lamp Policy page appears.

Step 2
Click the drop-down list that corresponds to the line that you want to change. Choose Use System Policy, Always light, or Never light.

Step 3
Click Update.

Step 4
When you are finished, click Return to the Menu or Log Off at the bottom of the page.

Related Topics
Changing the LCD Screen Contrast

To improve the readability of the LCD screen, follow these steps to adjust the contrast.

Procedure

**Step 1** Press the Settings button.

**Step 2** From the Settings menu, use the Navigation button to select **Contrast**.

**Step 3** Perform one of the following:
- To set the desired contrast level—press the **Up** or **Down** softkeys (or the Volume buttons).
- To restore your previously saved contrast setting—press the **more** softkey and then the **Restore** softkey.
- To restore the factory default contrast setting—press the **more** softkey and then the **Factory** softkey.

**Step 4** Press the **OK** softkey to accept and save your changes.

Related Topics

- Personalizing the Ringer Sound, page 2-3
- Adjusting the Message Waiting Indicator Light, page 2-4
Changing the Language for the Phone LCD Screen

Use this procedure to change the default language in which information is displayed on the Cisco IP Phone’s LCD screen.

Note
If you use the Cisco CallManager Extension Mobility service, follow the procedure described in the “Changing the Default Language for the User Options Web Pages” section on page 1-17. This procedure allows you to change the default language for your device profile.

Before You Begin
Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.

Procedure

Step 1 From the User Options main menu, select your phone from the “Select a device to configure” drop-down list.

Step 2 Click Change the Locale for this phone.

The Select a User Locale for your Phone page appears.

Step 3 Select the language that you want to use as the default language from the “User Locale for this phone” drop-down list and click Update.

The language that you have selected now serves as the default language for your Cisco IP Phone LCD screen.

If you change the default language for your phone’s LCD screen while you are on an active call, the phone waits for you to end the call before updating the LCD screen.

Step 4 When you are finished, click Return to the Menu or Log Off at the bottom of the page.

Table 3-3 Ending a Call (continued)
Chapter 3  Placing a Call and Other Basic Phone Tasks

Making Telephone Calls

Putting a Call on Hold

When you put a call on hold, the call remains active even though you and the other party cannot hear one another. You can answer other calls while a call is on hold.

**Note**

Engaging the Hold feature generates music or a beeping tone. For this reason, avoid putting a conference call on hold.

**Table 3-4** lists ways to use the Hold feature:

<table>
<thead>
<tr>
<th>If you...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>want to put a call on hold</td>
<td>Press the <strong>Hold</strong> softkey.</td>
</tr>
<tr>
<td>want to resume a call on hold</td>
<td>Press the <strong>Resume</strong> softkey.</td>
</tr>
<tr>
<td>have multiple calls on hold</td>
<td>Use the Navigation button to select the desired call before you press <strong>Resume</strong>.</td>
</tr>
<tr>
<td>have multiple calls on multiple lines on hold</td>
<td>Press the <strong>line</strong> button for the line to which you want to switch and use the Navigation button to select the desired call. Press <strong>Resume</strong>. If you cannot use the Navigation button because only one line displays on your phone’s LCD screen, press the <strong>line</strong> button next to the call that you want to resume. If your phone opens a new line when you press the line button, press the <strong>EndCall</strong> softkey to return to the desired call. <strong>Tip</strong> If you are using multiple lines, to see the phone number for a call you have on hold, press the ? button followed by the line button of the call on hold.</td>
</tr>
</tbody>
</table>

How to Get Notified When a Busy Line is Available Using Cisco Call Back

If you call an extension and the line is busy or the call goes unanswered, you can use the Cisco Call Back feature to be notified when the extension is available to take a call.

**Procedure**

**Step 1**
Call an extension. While you hear the busy tone or ringing tone, press the *CallBack* softkey.

A CallBack activation confirmation message displays.

**Note**
You cannot activate call back notification if the called party has forwarded all calls to another extension.

**Step 2**
Press the *Exit* softkey to close the confirmation screen or press the *Cancel* softkey to cancel the call back notification.
Step 3  To verify the status of the call back notification, press the **CallBack** softkey while your phone is idle.

A confirmation message displays.

Press the **Exit** softkey to close the confirmation screen or press the **Cancel** softkey to cancel call back notification.

Step 4  When the extension you called is available to receive a call, you receive an audio and visual alert from your phone. Press **Dial** to dial the number.

### Storing and Retrieving a Call Using Call Park

Park a call when you want to store the call before retrieving it from another phone in the Cisco CallManager system (for example, a phone in someone else’s office or in a conference room). Call park numbers are pre-configured for this purpose by your system administrator.

#### Procedure

**Step 1**  During an active call, press the **more** softkey until you see the **Park** tab.

**Step 2**  Press **Park**. The LCD screen displays the special call park number at which the call is stored. If the screen does not display a call park number, the call park feature is not available to you.

**Step 3**  Make a note of the call park number, then hang up. The call is parked at that number, allowing you to retrieve it from another phone.
Chapter 3    Placing a Call and Other Basic Phone Tasks

Making Telephone Calls

Step 4   To retrieve the parked call from any phone in the Cisco CallManager system, dial the call park number at which the call is parked.

Note   You have a limited amount of time to retrieve the parked call before it reverts to ringing at its original destination. See your system administrator for this time limit.

Answering Calls on Another Extension Using Call Pickup

You can answer an incoming call that is ringing on a telephone extension other than your own by using the call pickup feature.

There are two types of call pickup available on the Cisco IP Phone, as described in these topics:
- How to Pick Up Calls Within Your Group, page 3-11
- How to Pick Up Calls Outside of Your Group, page 3-11

Note   Call pickup and group call pickup are optional features configured by your system administrator; your phone does not support these features by default.

Related Topics
- Placing a Call, page 3-2
- Answering a Call, page 3-4
- Ending a Call, page 3-4
How to Pick Up Calls Within Your Group

Call pickup allows you to pick up incoming calls within your own group. A “group” in this sense is any consolidation of Cisco IP Phone extensions, as defined by your system administrator. For example, your group might contain co-workers in neighboring offices or cubes.

Activate call pickup so that an incoming call delivered to another extension in your group rings on your extension.

Procedure

Step 1 Press any available line button on your Cisco IP Phone.
Step 2 Press the PickUp softkey. The call now rings on your phone.
Step 3 Answer the incoming call.

Tip If there is more than one incoming call involved when you activate call pickup, the first unanswered call will ring at your phone.

Related Topics

- Storing and Retrieving a Call Using Call Park, page 3-9

How to Pick Up Calls Outside of Your Group

Group call pickup allows you to pick up incoming calls within your own group or in other groups. A “group” might contain co-workers in neighboring offices or cubes.

You must dial the appropriate call pickup group number when using this feature. A call pickup group number is provided to you by your system administrator.
Using Speed Dial

**Procedure**

**Step 1** Press any available line button.

**Step 2** Press the **GPickUp** softkey.

**Step 3** Dial the required call pickup group number.

**Step 4** Answer the incoming call that is redirected to your phone.

**Step 5** To pick up a call using a different call pickup group number, hang up and begin again at Step 1.

---

**Tip**

If there is more than one incoming call involved when you activate group call pickup, you receive the first unanswered call. If there is no unanswered call in the group, or if you dial an invalid group number, you receive a fast busy tone.

**Related Topics**

- Storing and Retrieving a Call Using Call Park, page 3-9

---

**Using Speed Dial**

The buttons to the right of the LCD screen on your Cisco IP Phone can be used as phone lines or as speed dial buttons, as determined by your system administrator. You can assign phone numbers and text labels to speed dial buttons using the Cisco CallManager User Options web pages.

Unlike the Fast Dial feature (see the “Using Fast Dials” section on page 5-12), Speed Dial does not require subscribing to or using a service.

---

**Note**

If you are using one or more Cisco IP Phone 7914 Expansion Modules, you can access extra speed dial or line buttons. To configure speed dial buttons for your Expansion Module, follow the steps in the procedure below.
Follow these instructions to set up your speed dial buttons.

**Before You Begin**

Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.

**Procedure**

**Step 1**

From the User Options web page, click *Add/Update your Speed Dials*.

The Add/Update Your Speed Dials page appears. You will see a section for setting speed dials on your phone. If you have one or more Expansion Modules, you will see another section for setting speed dials for each of your Expansion Modules.

**Step 2**

In an available Speed Dial box, enter a phone number or extension that you want to associate to one of your speed dial buttons.

**Note**

Be sure to enter the number exactly as you would if you were to call that number. For example, include an access code such as 9 or the area code, if necessary.

**Step 3**

In each corresponding Display Text box, enter a text label that you want displayed on your phone’s LCD screen. You can enter a maximum of 30 characters for phone base text and 14 characters for Expansion Module text.

**Step 4**

Click *Update* to activate new speed dial buttons and to display the corresponding text on your phone’s LCD screen. Your LCD screen(s) and lighted buttons will reset.

**Step 5**

When you are finished, click *Return to the Menu* or *Log Off* at the bottom of the page.

**Note**

If your phone uses Cisco CallManager Extension Mobility, you will need to log out and back in to the extension mobility service on your phone before the changes take effect.
Forwarding Calls to Another Extension

Forwarding calls to another extension allows you to redirect all incoming calls from your Cisco IP Phone to another number.

Use call forwarding to:

- Send incoming calls to another number where you can answer the calls (for example, if you are going to be working in an alternate office).
- Send incoming calls directly to voice mail. Your desk phone does not ring when calls are routed to your voice mail through the call forwarding feature.

Call forwarding can send your calls to another IP Phone or to a traditional analog phone.

If there is no answer at the forwarded number, either a person or voice mail, the call will be sent back to your voice mail system.

- Canceling Call Forwarding, page 3-16

Setting Up Call Forwarding on Your Phone

Follow these steps to set up call forwarding on your phone.

Procedure

1. Press the **CFwdAll** softkey. You should hear two beeps.

2. Enter the number to which you want to forward all of your calls, exactly as you would if you were placing a call to that number.
For example, enter an access code such as 9 or the area code, if necessary. Your system administrator might restrict the call forwarding feature to numbers within your company.

After you enter the number, an animated phone icon with a flashing right arrow appears in the upper-right corner of the LCD screen. The LCD screen also displays a message confirming the number or extension to which your calls are being forwarded.

**Step 3** To cancel call forwarding, press the **CFwdAll** softkey.

---

**Tips**

- To set up call forwarding when not at your phone, see the “Setting Up Call Forwarding When Not at Your Phone” section on page 3-15.
- To use call forwarding to send all of your incoming calls directly to your voice mail without causing your desk phone to ring, see the “Setting Up Call Forwarding When Not at Your Phone” section on page 3-15.

**Setting Up Call Forwarding When Not at Your Phone**

If you are away from your phone, use the Cisco CallManager User Options web pages to set up call forwarding.

**Before You Begin**

Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.
Forwarding Calls to Another Extension

Procedure

Step 1 From the User Options web page, click **Forward all calls to a different number**. The Forward Your Calls page appears.

Step 2 Check the check box next to the line from which you want your incoming calls forwarded.

Step 3 Choose where to send calls:

- To send calls directly to voice mail, and not ring your phone, choose **Voice Mail**.
- To send calls to a specific number, choose **this number** and enter the phone number or extension in the box provided.

Be sure to enter the number exactly as you would if you were to call that number. For example, enter an access code such as 9 or the area code, if necessary. Your system administrator might restrict the call forwarding feature to numbers within your company.

Step 4 Click **Update**.

Canceling Call Forwarding

You can cancel call forwarding from either your phone or on the web.

To cancel call forwarding from your phone, press the **CFwAll** softkey.

To cancel call forwarding when you are away from your phone, perform the following procedure.
Making Conference Calls

Your Cisco IP Phone supports conference calls, enabling you to talk with multiple parties at the same time. When you are on a conference call, you can use regular phone features such as Mute, Hold, Transfer, and speakerphone.

This section covers the following topics:

- **Placing a Conference Call**, page 3-18
- **Using Meet-Me Conferences**, page 3-18
- **Conferencing by Barging in on Established Conversations**, page 3-20

Before You Begin

Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.

Procedure

**Step 1** From the User Options web page, click **Forward all calls to a different number**. The Forward Your Calls page appears.

**Step 2** Clear the checkbox next to the line for which you want to cancel call forwarding.

**Step 3** Click **Update**.

Related Topics

- **Setting Up Call Forwarding When Not at Your Phone**, page 3-15
Placing a Conference Call

Follow these steps to turn a call into a conference call.

**Procedure**

**Step 1**
During a call, press the more softkey and then the Confrn softkey. Doing so automatically activates a new line and puts the first party on hold.

**Step 2**
Place a call to another number or extension.

**Step 3**
When the call connects, press Confrn again to add the new party to the conference call.

Repeat these steps to add parties to the conference call.

Once the conference call initiator disconnects, no additional parties can be added.

You can drop the last party added by pressing the RmLstC softkey.

Using Meet-Me Conferences

Your Cisco IP Phone supports Meet-Me conferences. A Meet-Me conference allows other callers to dial into the conference call. A Meet-Me conference requires a special conference number which is pre-configured for this purpose by your system administrator.

This section covers these topics:
- Establishing a Meet-Me Conference, page 3-19
- Joining a Meet-Me Conference, page 3-19
Establishing a Meet-Me Conference

Follow these steps to establish a Meet-Me conference call.

**Before You Begin**
Contact your system administrator for the necessary Meet-Me conference number or numbers.

**Procedure**

<table>
<thead>
<tr>
<th>Step 1</th>
<th>Press the more softkey twice to display the Meet-Me tab.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>Press the Meet-Me softkey.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Dial the Meet-Me conference number.</td>
</tr>
<tr>
<td>Step 4</td>
<td>Follow the voice instructions to establish the Meet-Me conference.</td>
</tr>
</tbody>
</table>

Conferencing by Barging in on Established Conversations

The Barge feature lets you add yourself to a call in progress on a shared line appearance.

If the party whose call you barged puts the call on hold, puts it in a conference, or transfers it, you are disconnected from the call.

Note
You cannot be on two barged calls at the same time. You cannot put a barged call on hold and resume the call. You cannot answer a second line while on a barged call.

Procedure

Step 1
Select an active call on one of your shared lines.

Step 2
Press the Barge softkey.

The phone creates a conference call and sends a beep tone to all the members of the conference to indicate that the barge occurred and that the conference started.

Step 3
To end the conference, hang up.

When you hang up, the remaining parties receive a disconnect tone, and the original call continues.

Using Voice Mail

Your phone administrator chooses the voice mail system that your phone uses. For information on how to use your voice mail system, refer to the documentation that came with it. For example, if your administrator configured your phone system to work with Cisco Unity, you would refer to the Cisco Unity documentation about working with your voice mail.

Your Cisco IP Phone indicates that you have one or more new voice mail messages by providing the following cues:

- The red light on your handset remains lit. (This indicator can vary, depending on the how the message waiting indicator lamp is configured. See the “Adjusting the Message Waiting Indicator Light” section on page 2-4.)
- A flashing envelope icon displays next to the appropriate line appearance on the LCD screen.
- A text message on the LCD screen displays.

To set up voice mail, press the Messages button on your Cisco IP Phone and follow the voice instructions. Your system administrator will provide you with a default password. For security reasons, you should change your default password as soon as possible.

To access voice mail, press the Messages button and follow the voice instructions.

Viewing and Dialing from the Phone Logs

If your phone display indicates that you have missed calls, you can use the Missed Calls option on the Directory menu to view your call history and to call back the person whose call you missed. Likewise, you can view call histories and place calls from the Received Calls and Placed Calls directories.

If the network shuts down or is reset, you might lose your call history records. If you use Cisco CallManager Extension Mobility
(see the “Logging Into Your Extension from Any Phone Using the Cisco CallManager Extension Mobility Feature” section on page 4-1), the call history is only available for times you are logged into the phone. Also, there is a limit on the number of call history records that can be stored. Your system administrator can provide information on this limit.

You can delete all records in the Missed, Received, or Placed directories. From the Directories menu, use the Navigation button to select the directory that you want to delete and press the Clear softkey.

Follow these steps to view or dial from a call log on your phone:

**Procedure**

**Step 1** Press the Directories button.

**Step 2** Use the Navigation button to select the desired directory from the Directories menu, then press the Select softkey.

**Step 3** To place a call from any directory, use the Navigation button to select the record, then press the Dial softkey.

**Note** You might need to use the EditDial softkey to add digits to the front of the number. For example, if the call was from an outside, long-distance caller, you might need to add the digits 9-1 to the front of the number. Then, press the Dial softkey.

**Step 4** Press the Exit softkey twice to exit the Directory menu.

**Related Topics**

- Using Fast Dials, page 5-12
Searching and Dialing from the Phone Directory

Your phone may come configured with a corporate or local phone directory. This directory is searchable and allows you to find and dial phone numbers of colleagues easily.

Follow these steps to view or dial from a directory in your company.

Procedure

Step 1 Press the Directories button.

Step 2 Use the Navigation button to select the desired directory from the Directories menu, then press the Select softkey.

Step 3 Enter search criteria to retrieve a record (see the “Navigating on Your Phone” section on page 1-11 for information on entering characters into your phone.)

Step 4 To place a call from any directory, use the Navigation button to select the record, then press the Dial softkey.

Note You might need to use the EditDial softkey to add digits to the front of the number. For example, if the call was from an outside, long-distance caller, you might need to add the digits 9-1 to the front of the number. Then, press the Dial softkey.

Step 5 Press the Exit softkey twice to exit the Directory menu.

Logging Into Your Extension from Any Phone Using the Cisco CallManager Extension Mobility Feature

Your system administrator might provide you with a service called Cisco CallManager Extension Mobility. This service allows you to associate your phone number and user profile with any Cisco IP Phone. When you use your Cisco CallManager Extension Mobility personal identification number (PIN) to log in to a Cisco IP Phone, your assigned telephone number, and the settings that you have established from the Cisco CallManager User Options web pages, are associated with that phone.

Note

For information about the User Options web pages, see Chapter 1, “Customizing Your Phone From the User Options Web Pages”.

Cisco CallManager Extension Mobility is useful to you if you do not routinely conduct business in the same office space every day.

Your system administrator will inform you whether this service is available to you.

If you are logged out of a Cisco IP Phone that has the Cisco CallManager Extension Mobility feature configured for it, you will not be able to make calls, receive calls, or check voice mail messages from that phone until you log in. Also, Cisco CallManager Extension Mobility might automatically log you out after a certain amount of time. This time limit is established by your system administrator. Therefore, it is recommended that you log in to your phone at the
beginning of every day. If you hear a busy signal after pressing the Messages button or any key on the touch tone key pad, then you must log in before using the phone.

With Cisco CallManager Extension Mobility, you can be logged into only one phone at a time. If you want to use another phone, you must log out of the first phone.

Your Cisco CallManager Extension Mobility profile does not maintain ring type, contrast settings, and volume settings; configure these settings directly on the Cisco IP Phone.

This section covers the following topics:
- Logging in to Cisco CallManager Extension Mobility, page 4-2
- Logging Out of Cisco CallManager Extension Mobility, page 4-4
- Changing Your Cisco CallManager Extension Mobility PIN, page 4-5

## Logging in to Cisco CallManager Extension Mobility

To log in to Cisco CallManager Extension Mobility, perform the following steps.

Your system administrator will provide you with the necessary user ID and personal identification number (PIN).

---

### Procedure

**Step 1** Press the Services button on your Cisco IP Phone.

**Step 2** From the Services menu, use the Navigation button to select the login option for extension mobility. Then, press the Select softkey.
Note
Your system administrator chooses the name for your particular extension mobility service. These options might display on the Settings menu of your phone LCD screen as “extension mobility service,” for example.

Step 3
Enter your user ID. For information on entering letters on your phone, see the “Navigating on Your Phone” section on page 1-11.

Step 4
Use the Navigation button to scroll down to the PIN prompt and enter your PIN.

Step 5
Press the submit softkey.

The Cisco IP Phone to which you have logged in now adopts your user profile information, including your speed dials and established services. The phone also becomes associated with your phone number. If you login while the receiver is off hook, the changes will not take effect until you hang up.

You may be prompted to select the device profile to use. Use the Navigation button to scroll to the device and click the Select softkey.

Step 6
Press the Exit softkey to return to the previous screen.

Related Topics

Logging Out of Cisco CallManager Extension Mobility

When you are ready to log out of Cisco CallManager Extension Mobility, follow these steps.

Procedure

Step 1 Press the Services button on your phone.
Step 2 Use the Navigation button to select the logout option for Cisco CallManager Extension Mobility.
Step 3 Press the Select softkey.
Step 4 The phone might display “Do you want to log out <your UserID>?” If it does, select Yes.
Step 5 Press the Exit softkey to return to the previous screen.

Changing Your Cisco CallManager Extension Mobility PIN

To change your Cisco CallManager Extension Mobility PIN, use the Cisco CallManager User Options web pages:

Note
Changing your PIN will effect any service that requires a PIN, such as Personal Address Book and Personal Fast Dials. If you use these services and change your PIN, you must update those services before you can use them.

Before You Begin
Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.

Procedure

Step 1 From the User Options main menu, click Change your PIN.

Step 2 Enter your current PIN and a new PIN in the required fields, then click Update.

Step 3 When you are finished, click Return to the Menu or Log Off at the bottom of the page.

Managing Your Contacts

Your Cisco IP Phone might supply several different features to help you manage your phone contacts: a personal address book, a Cisco IP phone synchronizer, the Personal Address Book service, and the Personal Fast Dials service.

The Personal Address Book allows you to store names and numbers of your common contacts. From your Cisco IP Phone, you can use the Personal Address Book service to look up entries, make a selection, and press a softkey to dial the selected number.

With the Personal Fast Dials service, you can assign index numbers (from 1 to 99) for quick dialing from your Cisco IP Phone. You can assign index numbers either to Personal Address Book entries or to directory entries that you add that do not correspond to the address book. You can assign and remove the Personal Fast Dials entries from your phone or the Cisco IP Phone User Options application.

Note
The exact names of the Personal Address Book and Personal Fast Dials services may vary, depending on how your system administrator configured the services.

With the Personal Directory synchronization tool, you can synchronize the Microsoft Windows address book, Microsoft Outlook and/or your Outlook Express address book entries stored on your computer with the Cisco CallManager directory.

These features are optional. Talk to your phone administrator about which features are available to you.
Managing Your Personal Address Book

You can set up and maintain a personal address book that contains listings for people internal and external to your company. You can also assign Fast Dial codes to personal address book entries and dial those codes in place of phone numbers.

Subscribing to Personal Address Book

The Personal Address Book service allows you to look up address book entries and to dial a chosen number by pressing a softkey on your phone.

Before You Begin
Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.
Chapter 5  Managing Your Contacts

Managing Your Personal Address Book

Procedure

Step 1  From the User Options Menu window in the Cisco IP Phone User Options application, choose a device to configure, such as your primary phone.

Step 2  Click the Configure your Cisco IP Phone Services link. The Cisco IP Phone Services window displays.

Step 3  Choose the service as named by your system administrator; for example, My Address Book.

Step 4  Click Continue.

Step 5  Enter the appropriate service information. An asterisk indicates required fields. For a description of each field, click the Description link next to the field.

Step 6  Click Subscribe.

Creating a New Address Book Entry on the Web

Follow these steps to create a new address book entry.

**Before You Begin**

Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.

**Procedure**

1. **Step 1**
   From the User Options web page, click **Configure your Cisco Personal Address Book**.
   The Find/List Personal Address Book Entries page appears.

   **Note**
   You can add entries manually or use a synchronizer application to automatically import entries from your Microsoft Outlook address book. To obtain the synchronizer, contact your system administrator.

2. **Step 2**
   Click **Add a New Entry**.
   The Address Book Entry window appears.

3. **Step 3**
   Enter information in the desired fields and click **Insert**.

4. **Step 4**
   When you are finished:
   - Click **Return to Search**, **Fast Dials**, or **Add a New Entry** to continue working in the Find/List Address Book Entries page.
   - To exit, click **Return to the Menu** or **Log Off** at the bottom of the page.

**Related Topics**

Managing Your Personal Address Book

Searching for or Editing a Personal Address Book Entry on the Web

Follow these steps to search for an address book entry. After you find the entry, you can modify or delete the entry, if necessary.

Before You Begin
Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.

Procedure

Step 1  From the User Options web page, click Configure your Cisco Personal Address Book.

The Find/List Personal Address Book Entries page appears.

Step 2  Enter the name you want to find by First Name, Last Name, or Nickname and click Find; you can enter partial or complete information in any search field (wildcard symbols such as * are implicit and do not need to be entered.)

If you want to view all entries in your address book, click Find without entering a name.

Step 3  Click on any portion of the person’s name to display the complete entry or enter more search information to further refine your search.

Step 4  If you want to edit any of the information, make the necessary changes, and click Update.

Managing Your Personal Address Book

Searching Personal Address Book Entries on Your Phone

Use the following procedure to find a personal address book entry.

Procedure

**Step 1** Press the services button.

The phone displays the services that have been configured for your phone.

**Step 2** Use the navigation button to highlight the option that corresponds to the My Address Book service and press the Select softkey.

Tip  The exact service name may vary, depending on how your system administrator configured the service.

**Step 3** Perform one of the following actions:

- To display a specific name, enter the name using your phone keypad and press the Submit softkey. All names that match your search criteria will display.
- To display all your address book entries, press the Submit softkey.

**Step 4** Using the navigation button, highlight the entry that you want and press the Select softkey.

Editing a Personal Address Book Entry on Your Phone

Use the following procedure to edit a Personal Address Book entry.

**Procedure**

1. **Step 1** Find the entry that you want to edit as described in “Editing a Personal Address Book Entry on Your Phone” section on page 5-7.
2. **Step 2** Press the **Edit** softkey.
   The phone displays the Personal Address Book information for that entry.
3. **Step 3** Perform one of the following actions:
   - To edit the first name, last name, or nickname for this entry, press the **Name** softkey.
   - To edit the home, work, or mobile numbers, press the **Phone** softkey.
4. **Step 4** Make your changes and press the **Submit** softkey.
   The phone displays a message that your change is successful.
5. **Step 5** Press the **OK** softkey.

Deleting an Address Book Entry on the Web

Follow these steps to delete an address book entry.

**Before You Begin**
Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.

**Procedure**

**Step 1** Find the entries you want to delete (see the “Searching for or Editing a Personal Address Book Entry on the Web” section on page 5-5.)

**Step 2** To delete an individual entry, check the checkbox next to the entry.
To delete all entries displayed as a result of your search, check the checkbox in the heading bar above the individual entries. Doing so automatically selects each of the displayed entries.

**Step 3** Click **Delete Selected**.

Dialing a Personal Address Book Entry

Use the following procedure to dial a Personal Address Book entry.

Procedure

Step 1  Find the entry that you want to dial as described in “Editing a Personal Address Book Entry on Your Phone” section on page 5-7.

Step 2  Use the navigation button to choose the directory number that you want to dial and press the Dial softkey.

Using the Cisco IP Phone Address Book Synchronizer

You can synchronize your Microsoft Outlook and/or your Outlook Express address book entries with the directory in Cisco CallManager using the Cisco IP Phone Address Book Synchronizer.

• Installing the Cisco IP Phone Address Book Synchronizer, page 5-9
• Configuring the Cisco IP Phone Address Book Synchronizer, page 5-11

Installing the Cisco IP Phone Address Book Synchronizer

To install Cisco IP Phone Address Book Synchronizer, perform the following steps.
Before You Begin
You need to get the Cisco IP Phone Address Book Synchronizer installer file from your system administrator.

Procedure

Step 1 Double-click the TabSyncInstall.exe file provided by your system administrator. The Welcome to Cisco IP Phone Address Book Synchronizer window displays.

Step 2 Click Next. The License Agreement window displays.

Step 3 Read the license agreement information, and click Yes to accept. The Choose Destination Location window displays.

Step 4 Choose the directory in which you want to install the application and click Next. The Start Copying Files window displays.

Step 5 Verify that you have chosen the correct directory, and click Next. The installation wizard installs the application to your computer. When the installation is complete, the InstallShield Wizard Complete window displays.

Step 6 Click Finish. For information on configuring the Cisco IP Phone Address Book Synchronizer, see “Configuring the Cisco IP Phone Address Book Synchronizer” section on page 5-11.

Related Topics
- Configuring the Cisco IP Phone Address Book Synchronizer, page 5-11
- Using the Cisco IP Phone Address Book Synchronizer, page 5-9
Configuring the Cisco IP Phone Address Book Synchronizer

Use the following steps to configure the Cisco IP Phone Address Book Synchronizer and to synchronize your address book.

Procedure

Step 1  Open the Cisco IP Phone Address Book Synchronizer.
        If you accepted the default installation directory, you can open the application by choosing Start > Programs > Cisco > IP Phone Address Synchronizer.

Step 2  To configure user information, click the Password button.
        The Cisco IP Phone User window displays.

Step 3  Enter the Cisco IP phone user name and password and click OK.

Step 4  To configure synchronization rules, click the Rules Options button.

Step 5  Choose the synchronization method that you want to use and click OK.

Step 6  To configure Cisco CallManager information, click the CCM Server button.
        The Configure Cisco CallManager Web Server window displays.

Step 7  Enter the IP address or host name of the Cisco CallManager and click OK.
        If you do not have this information, contact your system administrator.

Step 8  Click the Password button.
        The Cisco IP Phone User window displays.

Step 9  Enter your user identification and password for the Cisco IP Phone User Options application.

Step 10  To start the directory synchronization process, click the Synchronize button.
        The Synchronization Status window provides information on the status of the address book synchronization. If you chose the user intervention for duplicate entries rule and you have duplicate address book entries, the Duplicate Selection window displays. Choose the entry that you want to include in your Personal Address Book and click OK.

Step 11  When synchronization completes, click Exit to close the Cisco IP Phone Address Book Synchronizer.
Using Fast Dials

With Personal Fast Dials, you can assign index numbers (from 1 to 99) to phone numbers for quick dialing from your Cisco IP phone.

To use Personal Fast Dials, you must subscribe to the Fast Dials service and use either your phone or the User Options web pages to assign fast dial numbers.

---

**Using Fast Dials**

---

**Subscribing to Personal Fast Dials**

To subscribe to the Personal Fast Dials service, perform the following steps.

**Before You Begin**

Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.
Chapter 5  Managing Your Contacts

Using Fast Dials

Procedure

Step 1  From the User Options Menu window in the Cisco IP Phone User Options application, choose a device to configure, such as your primary phone.

Step 2  Click the Configure your Cisco IP Phone Services link.

Step 3  Choose the service as named by your system administrator; for example My Fast Dials and click Continue.

Step 4  Enter the appropriate service information. An asterisk indicates required fields. For a description of each field, click the Description link next to the field.

Step 5  Click Subscribe.

Assigning Fast Dial Codes to Phone Numbers on the Web

The Fast Dial feature allows you to assign a fast dial code to a phone number for easier dialing. Unlike speed dial, the fast dial feature is not limited by the availability of line buttons on your Cisco IP Phone. Instead, fast dial codes are one or two number codes (1 to 99) that you dial instead of a complete phone number.
Follow these steps to assign a fast dial code to a phone number.

**Procedure**

**Step 1** Begin by searching for the address book entry to which the phone number belongs. See the “Searching for or Editing a Personal Address Book Entry on the Web” section on page 5-5 for instructions.

**Step 2** Next, click the fast dial icon that corresponds to the appropriate entry. The Add a New Fast Dial Entry pop-up window appears.

*Note* If no fast dial icon is displayed, you have not entered a phone number for that person’s address book entry yet. In this case, click on the person’s name to modify the entry.

**Step 3** In the Fast Dial Association area, choose a fast dial code for this entry from the “Index” drop-down list. Choose any fast dial code number not already assigned.

**Step 4** In the Directory Number Association area, select an address book entry. For example, select “John Smith.”

**Step 5** If the phone number to which you want to assign a fast dial code
- already exists in your personal address book—click on the Directory Number drop-down list to choose the phone number. Choose H for a home number, W for a work number, or M for a mobile phone number. For example, choose “W-4321” for John Smith’s work number.
- does not exist in your address book, enter the phone number in the “Enter a directory number” field.

*Note* Be sure to enter the number exactly as you would if you were to call that number. For example, include an access code such as 9 or the area code, if necessary.

**Step 6** Click Insert and close the window.

**Step 7** From the Find/List Address Book Entries page, click Fast Dials.

On the line that corresponds to the index (fast dial code number) that you chose, you will see a name or phone number:
If you chose an existing entry from your address book, then you can see the person’s nickname (or first and last name if no nickname is available). The initial M, W, or H (mobile, work, or home phone number, respectively) is displayed next to the person’s name.

If you chose to enter a new phone number for someone already included in your personal address book (instead of choosing an existing phone number), you will see the phone number that you entered next to the fast dial code.

Tip

If the person to whom you want to assign a fast dial code is not included in your personal address book, do the following: Click on Fast Dials on the bottom of the Find/List Address Book Entries page, then click any “Unassigned” fast dial listing to display the Add a New Fast Dial Entry pop-up window. Follow the above instructions, omitting Step 3.

**Removing Personal Fast Dials Entries on the Web**

Use the following procedure to remove and entry from your personal fast dial list.

**Before You Begin**

Log in to the User Options web page. For information on the User Options web page and how to access it, see the “Logging In to the User Options Web Pages” section on page 1-16.
Procedure

**Step 1**  
From the User Options Menu window in the Cisco IP Phone User Options application, choose a device to configure, such as your primary phone.

**Step 2**  
Click the **Configure your Cisco Personal Address Book** link.  
The Find and List Personal Address Book Entries window displays.

**Step 3**  
Click the **Fast Dials** link.

**Step 4**  
Check the checkboxes next to the entries that you want to remove. To choose the displayed entries, select the checkbox in the title bar above the fast dials list.

**Step 5**  
Click the **Delete** button.  
A confirmation dialog box displays.

**Step 6**  
To unassign the chosen entries, click **OK**.

**Creating a Personal Fast Dials Entry for a Number in Your Personal Address Book on Your Phone**

Use the following procedure to create a Personal Fast Dials entry for a number in your Personal Address Book. For information on creating an entry for a directory number that is not in your address book, see the “Creating a Personal Fast Dial Entry for a Non-Address Book Directory Number on Your Phone” section on page 5-17.
Using Fast Dials

Procedure

Step 1 Find the address book entry for which you want to create a fast dial as described in “Editing a Personal Address Book Entry on Your Phone” section on page 5-7.
Step 2 Use the navigation button to highlight the appropriate entry and press the Select softkey.
Step 3 Press the FastDial softkey.
Step 4 Use the navigation button to highlight the directory number that you want to assign to a fast dial index (home, work, or mobile) and press the Select softkey.
Step 5 Use the navigation button to choose a fast-dial index and press the Select softkey. A message displays that the Fast Dials entry has been created.
Step 6 Press the OK softkey.

Creating a Personal Fast Dial Entry for a Non-Address Book Directory Number on Your Phone

Use the following procedure to create a Personal Fast Dials entry for a directory number that is not in your Personal Address Book. For information on creating an entry for a number in your address book, see the “Creating a Personal Fast Dials Entry for a Number in Your Personal Address Book on Your Phone” section on page 5-16.
Using Fast Dials

Procedure

Step 1  From your Cisco IP Phone, press the services button.
The phone displays the services that have been configured for your phone.

Step 2  Use the navigation button to highlight the option that corresponds to the My Fast Dials service and press the Select softkey.

Tip  Remember, the exact service name may vary, depending on how your system administrator configured the service.

Step 3  Press the Assign softkey.
A message displays requesting you to choose an index to assign.

Step 4  Use the navigation button to highlight a fast-dial index and press the Select softkey.

Step 5  Enter a directory number and press the Submit softkey.
A message displays that the Fast Dials entry has been created.

Step 6  Press the OK softkey.

Dialing a Personal Fast Dials Entry

Use the following procedure to dial a number using the Personal Fast Dials service.

Before You Begin
Before you can use the Fast Dial feature on your Cisco IP Phone, you must subscribe to the Fast Dial service. For information on subscribing to services, refer to the “Establishing Cisco IP Phone Services” section on page 1-18.

Procedure

Step 1
From your Cisco IP Phone, press the services button. The phone displays the services that have been configured for your phone.

Step 2
Use the navigation button to highlight the option that corresponds to the My Fast Dials service and press the Select softkey.

Tip
Remember, the exact service name may vary, depending on how your system administrator configured the service.

A screen displays your Personal Fast Dials entries.

Step 3
Use the navigation button to choose a fast dial number and press the Dial softkey.

Using the Cisco IP Phone 7914 Expansion Module

The Cisco IP Phone 7914 Expansion Module attaches to phones in the Cisco IP Phone 7960 series and extends its functionality by adding 14 line appearances and/or speed dial numbers per module. One or two Expansion Modules can be attached to your IP Phone. One Expansion Module provides a total of 20 line and/or speed dial numbers. Two Expansion Modules provide a total of 34 line and/or speed dial buttons, as shown in Figure 6-1.

- If I cannot answer a call that I have forwarded to another number, will the call get re-routed to my voice mail system?, page A-5
- Can I use call forwarding to send my calls directly to voice mail, without ringing my desk top phone?, page A-6
- Why don’t I get a dial tone after dialing an access code?, page A-6
How do I access voice mail?

You can access your voice mail easily, just using the Messages button on your phone.

For information about setting up and accessing voice mail, refer to the “Using Voice Mail” section on page 3-21.

Related Topics
- Using the Feature Buttons, page 1-10

How do I set speed dials?

You add, modify, and delete speed dials on the User Options web page.

To set up your speed dials, refer to the “Using Speed Dial” section on page 3-12.

Related Topics
- Logging In to the User Options Web Pages, page 1-16
- Managing Your Contacts, page 5-1

How do I list my missed calls?

You can list the missed calls, placed calls, and received calls on your phone.

For more information, refer to the “Viewing and Dialing from the Phone Logs” section on page 3-21.

Related Topics
- Searching and Dialing from the Phone Directory, page 3-23
I don’t see a Hold button—how do I put someone on hold?

Some of the features and functions on your phone are accessed through softkeys. To put someone on hold, refer to the “Putting a Call on Hold” section on page 3-6.

Related Topics
• Navigating on Your Phone, page 1-11

How do I change the contrast on the phone LCD screen?

You can make it easier to read the text on your phone LCD screen by adjusting the contrast. To adjust the contrast, refer to the “Changing the LCD Screen Contrast” section on page 2-5.

Related Topics
• Customizing Phone Settings, page 2-1

How do I change the settings for my Cisco CallManager Extension Mobility line?

You change the settings for your Cisco CallManager Extension Mobility line the same way that you change them for a regular line. When you want to change any settings that are in the User Options web page, make sure to select the device profile for your extension mobility extension. The Cisco CallManager Extension Mobility device profile usually has identifying text in the name, such as “EM”.

Cisco IP Phone 7960 and 7940 Series User Guide
How do I forward calls?

You can forward calls either from your phone or from the User Options web page. You can either forward calls to another extension, or to voice mail. For more information, refer to the “Forwarding Calls to Another Extension” section on page 3-14.

Related Topics
- Logging Into Your Extension from Any Phone Using the Cisco CallManager Extension Mobility Feature, page 4-1

How do I store numbers of friends and colleagues that I want to call often?

You can store the numbers of other people easily, using either the phone or the User Options web pages.

If you have the Personal Directory service available on your phone, you can enter numbers using that service (see the “Searching Personal Address Book Entries on Your Phone” section on page 5-6.)

You can also enter numbers into the Personal Address Book on the User Options web pages (see the “Creating a New Address Book Entry on the Web” section on page 5-4.)

To phone these numbers quickly, you can set them up as either speed dials, which appear directly on your phone (see the “Using Speed Dial” section on page 3-12) or you can set them up as Fast Dials, if the phone service is available to you, (see the “Using Fast Dials” section on page 5-12.)

Related Topics
- Managing Your Contacts, page 5-1
I’ve used up all my speed dial lines, can I add more?

If you assigned numbers to all of the speed dial buttons on your phone, there are two ways to store numbers for fast retrieval:

- Add a Cisco IP Phone 7914 Expansion Module to your phone, and get an additional 14 speed dial lines (see Chapter 6, “Using the Cisco IP Phone 7914 Expansion Module.”)
- Use Fast Dials to store the rest of your phone numbers (see the “Using Fast Dials” section on page 5-12.)

Related Topics
- Managing Your Contacts, page 5-1

If I cannot answer a call that I have forwarded to another number, will the call get re-routed to my voice mail system?

Yes—as long as the forwarded call is not picked up by a person or a mechanical answering machine. Although call forwarding sends an incoming call intended for your Cisco IP Phone to another number, your Cisco IP Phone does not relinquish the forwarded call unless the call is answered (in other words, picked up by a person or a mechanical answering machine). Your Cisco IP Phone considers a forwarded call “unanswered” after a certain number of rings. Unanswered, forwarded calls are redirected to your voice mail system (if one is available).

Related Topics
- Using Voice Mail, page 3-21
Can I use call forwarding to send my calls directly to voice mail, without ringing my desk top phone?

Yes. Follow the procedure in the “Setting Up Call Forwarding on Your Phone” section on page 3-14 and choose the Voice Mail option.

Related Topics
- Using Voice Mail, page 3-21

Why don’t I get a dial tone after dialing an access code?

If you use an access code, such as 9, to make external calls, your Cisco IP Phone might not make a dial tone. Continue dialing your call.

Related Topics
- Making Telephone Calls, page 3-1
Safety Notices

Read the following safety notices before installing or using your Cisco IP Phone: These safety notices apply to phones in the Cisco IP Phone 7960 and 7940 series.

Warning
This warning symbol means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents.

Warning
Read the installation instructions before you connect the system to its power source.

Warning
Ultimate disposal of this product should be handled according to all national laws and regulations.

Warning
The plug-socket combination must be accessible at all times because it serves as the main disconnecting device.

Warning
Do not work on the system or connect or disconnect cables during periods of lightning activity.
Warning
To avoid electric shock, do not connect safety extra low voltage (SELV) circuits to telephone network voltage (TNV) circuits. LAN ports contain SELV circuits, and WAN ports contain TNV circuits. Some LAN and WAN ports use RJ-45 connectors. Use caution when connecting cables.

The following warnings apply when you use the external power supply with the Cisco IP Phone:

Warning
This product relies on the building’s installation for short-circuit (over current) protection. Ensure that a fuse or circuit breaker no larger than 120 VAC, 15A U.S. (240 VAC, 10A international) is used on the phase conductors (all current-carrying conductors).

Warning
The device is designed to work with TN power systems.
Troubleshooting Your Phone

This appendix contains procedures and troubleshooting information you might need to diagnose problems with your phone or to help install your phone. The information in this appendix is only necessary if your administrator asks you to perform one of the procedures.

- Accessing Network Configuration Data, page C-1
- Accessing Status Data, page C-2
- Accessing Network Configuration Data, page C-1
- Using the Quality Reporting Tool, page C-4

Accessing Network Configuration Data

You might need to access network configuration data to help your system administrator troubleshoot a problem that you are experiencing with your phone. Only a system administrator or technician can alter this data.

Follow these steps to access network configuration data.

**Procedure**

**Step 1** Press the *Settings* button.

**Step 2** From the Settings menu, use the Navigation button to select *Network Configuration*.
Accessing Status Data

Your network administrator or technician might want to access status information to monitor the performance of your phone. Follow these steps to access status data.

Procedure

Step 1
Press the **Settings** button.

Step 2
From the Settings menu, use the Navigation button to select **Status**.

Step 3
Press the **Select** softkey.

The Settings Status submenu appears.

Step 4
Use the Navigation button to select the item that you want to view and press the **Select** softkey.

From here, you can view Status Messages, Network Statistics, Firmware Versions, and Expansion Module Statistics for your phone.

Cisco IP Phone 7960 and 7940 Series User Guide
Depending on how your system administrator configured the Quality Reporting Tool for your phone, you can use the QRT softkey in one of two ways:

- To quickly report an audio problem with a current call, press the QRT softkey.
  
  Your phone will display: Audio quality data will be collected and logged.

- After you press the QRT softkey, you may be presented with a list of phone menu options to provide more details about the problem. Follow the instructions on the phone to submit the quality report information.
  
  Your phone will display: Your feedback has been logged.

In either scenario, press the Exit softkey to return to the previous screen.

The system routes the data or information you submitted to your system administrator to troubleshoot problems with your phone calls.
