Experiential Learning: How the Campus Can Bring Learning to Life

Do you teach complex, abstract, or theoretical concepts that students struggle to learn and apply? Do you want to revitalize and energize student learning by incorporating more experiential or contextualized learning with your students? Instructors are finding ways to create hands-on learning opportunities by using places and spaces on campus as a ‘living lab.’ When students apply theories and concepts outside of the classroom setting, deeper learning and engagement can take place. Join this unique seminar to learn about the framework of using various parts of our campus as a living lab, experience a couple of models of living lab activities, and begin to develop your own experiential learning activity. Two hours of this seminar will be online and four hours will be in-person and will involve walking short distances across the campus.
