TECHNOLOGY IS NOT THE ENEMY

With the rise in social media, such as Facebook, Twitter, YouTube, blogs and wikis, for the first time in history, students are more comfortable and knowledgeable than their instructors when it comes to technology. How can we, as educators, plug these students in and keep them engaged in the classroom? Why not use these technologies to get them engaged and connected.

This two-part workshop will cover the role of technology in the classroom and how you can use these resources to reach out to your students and connect with them on a level that relates to them.

GRACE REOTUTAR
FSC TECHNICAL SPECIALIST

PART I (FACE-TO-FACE)
GET CONNECTED

This session will introduce participants to Facebook, Twitter and YouTube. Participants will learn the advantages of social media and how to use it to interact with students. Worried about lack of funding? Lack of access? Lack of training? These tools are freely available, web-based and already being used by the students.

PART II (ONLINE)
BEYOND POWERPOINTS AND CLICKERS

Blogs, wikis and more... What exactly is a blog? Wiki? More importantly, how can you use these tools in the classroom? Participants will learn how to access and use these tools to promote new levels of student engagement.
