Believing is Seeing: Mental Feats & Defeats in the Classroom

MARK RAFTER

Everything is accomplished within the context of relationships, and within the learning environment students and faculty greet each other just as they greet each new day – with a set of prior experiences, cognitive biases, and expectations. Within this workshop we will review some of the factors that are known to contribute to the success or failure of relationships and explore how these relate to student success.

The research and examples presented here draw heavily from research in cognitive psychology and social psychology, but throughout this workshop the interdependence of our cognitions, emotions, and overt behavior will be emphasized. We’ll identify how each of these may exert influence over the other two.
