Flipping the Classroom

Did you know that 85% of teachers who flipped their classroom saw improvement in grades? Flipping the Classroom has proven to be an effective way to increase depth of instruction, active learning, interaction, feedback, and collaboration in the classroom. Not sure what flipping is all about? Want to learn about the benefits, challenges, practical tools, and strategies for enhancing your instruction through the flipping framework?

Register for the “Flipping the Classroom” seminar to learn about this innovative strategy. Participants will meet in person on Friday, February 28th for four hours to learn about flipping. During the following week, participants will experience additional learning through the flipped model via online learning. Participants will then meet on Friday, March 7th in a computer lab setting to learn about and use some online tools to create their own flipped activity.
